^{*} Secondary MCL: Secondary contaminants may cause cosmetic effects (such as skin or tooth discoloration) or aesthetic effects (such as taste, odor, or color) in drinking water. The Secondary Maximum Contaminant Level (SMCL) is a non-enforceable standard for secondary contaminants in drinking water. SMCLs may be based upon a contaminant's likelihood to cause changes to the taste, odor, or color of drinking water, or, may be based on the likelihood of the contaminant to cause technical changes such as damage to water fixtures or an increased availability of other contaminants in drinking water.

Tracking and Analyzing Contaminants (TrAC) in Private Well Water in NC UNC Superfund Research Program- Research Translation Core Funded by an ARRA supplement from NIEHS (P42-ES005948) 2009-2011
